# POMODUCTIVE

This website will provide its users the ability to track and manage their workload while utilizing maximum focus. Users will be able to add tasks and track their workload and the system will automatically notify users to take necessary breaks to utilize maximus focus. App will use the pomodoro technique which is a time management method developed by Francesco Cirillio in the 1980s. The system is proven to give its users the maximum productivity without adhering to painful discipline methods.
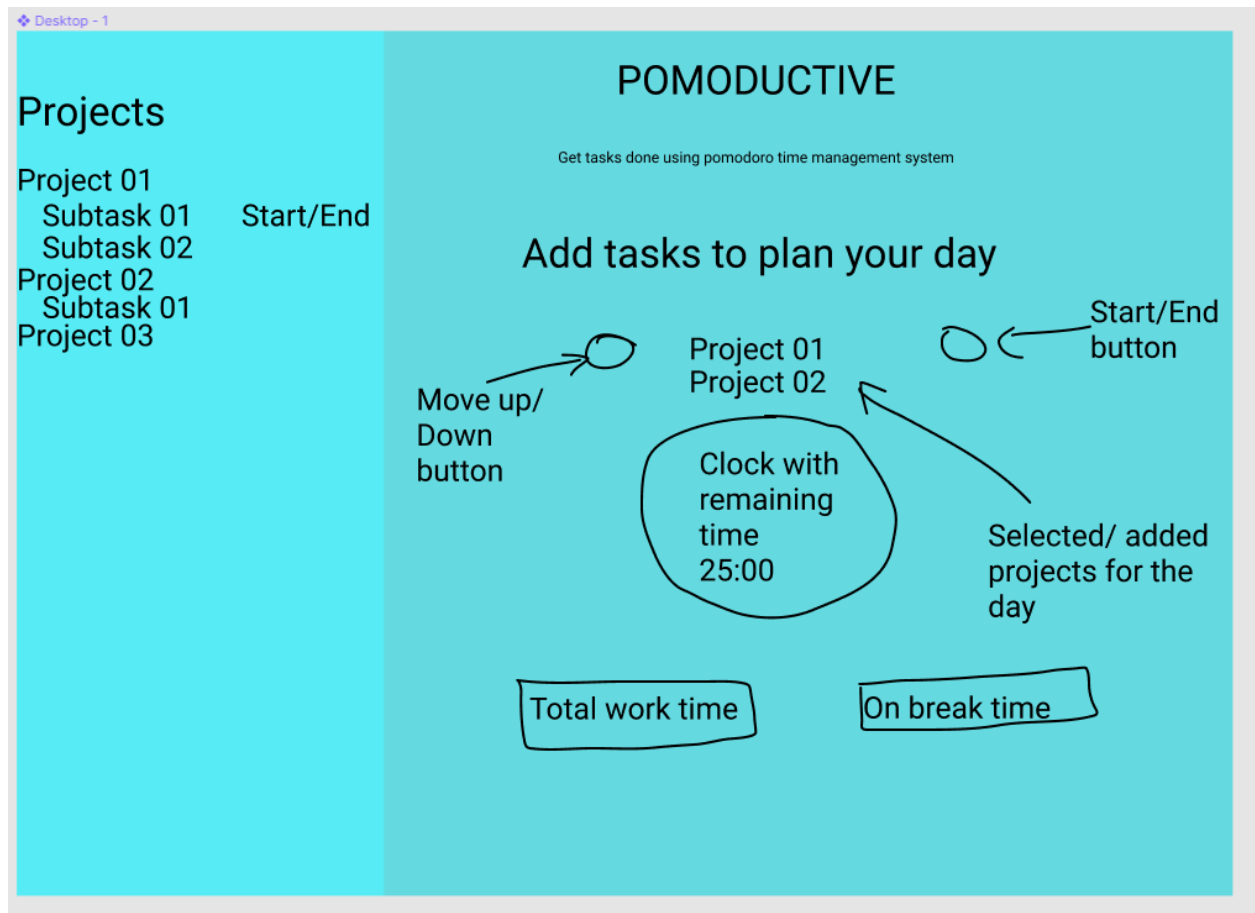

User requirements and stories

Requirements

Users must be able to add new tasks and subtasks.
Users must be able to remove or edit tasks.
Users must be able to view time spent on tasks and breaks.
Users must be able to view productivity stats for the day.

User stories

As a student: I should be able to add new tasks and subtasks depending on the module I'm working on. I should be reminded to take breaks. I should not be interrupted while working.

As a programmer : I should be able to add projects and see how much time I spent on each project. I should be reminded of breaks. I should be reminded of how much time I have to work until my day is off.

Employees : Should be able to keep track of breaks and how much time they have been able to stay productive. Given tasks should be broken down to subtasks to help me work more efficiently.

People with low attention/ focus: Should be able to see time until breaks. Time they have worked for the day.
